## printf() format string example

```
printf("%s\t%s\t%d\n", $1, $2, $3)
```

Tabs and newlines

Question 1 of 1

For the record 1857.9302, `printf("%06.1f", $0)` will print **1857.9** .

✔ You are correct!

Feedback

The `%06.1f` specifier sets the entire length to 6 characters with 1 decimal place.
